

Pulse Field Day: Friday 28th October 2022

9.30am – 12.00noon 1047-1085 Lanes Rd, Bundalong South

This is an opportunity for you to join us to take a look at the trials which are part of the GRDC investment Victoria Pulse Agronomy Project which aims to close the economic yield gap and maximise farming systems benefits from grain legume production in Victoria.

Rohan Brill of Brill Ag will be joined by FAR Australia's Research Manager Ben Morris, Tom Price and Rebecca Murray to guide you through the faba bean work, providing background on the trials and what they are aiming to achieve.

Given the wet conditions in Daysdale, NSW, we will also discuss the results from these trials.

Topics to be covered include:

- Disease management in faba beans - are there more sustainable ways to control disease in faba beans?
- Nutrition and biomass production in faba beans - how can we maximise pulse nutrition and biomass production?
- How do farmyard manures interact with pulse stubble in the following wheat crop?

There will also be an opportunity to hear from Dr Dorin Gupta and Waseem Ashfaq who will present on the Future Drought Fund and The University of Melbourne trial on drought resilience.

'This project received funding from the Australian Government's Future Drought Fund'
